PLANT LIST 2026

The Herb Nursery is a small, family-run, traditional nursery where 95% of the plants offered for sale are raised on site with individual care and attention. We are always happy to answer questions and give advice when required, so you can buy your plants direct from the grower.

The Herbs & Wild Flower section of this list is combined because so many come into both categories.

The Cottage Garden section has many traditional border plants as well as some more unusual perennial plants. Also under this heading are a number suitable for small gardens or rockeries.

The variety of perfume from the Scented-leaf Pelargoniums has to be experienced to be believed from refreshing '*Lemon Fancy*', fragrant '*Attar of Roses*' to the pungent '*Fair Ellen*'. The flower colours range from the tiny white *tomentosum* (peppermint-scented) and *odoratissimum* (apple-scented) to the larger more flamboyant colours of '*Paton's Unique*' and '*Sweet Mimosa*'.

We grow a comprehensive selection of seasonal plants including trailing geraniums and fuchsias as well as a range of plants for hanging baskets and patio planters.

All types of vegetable plants are available in season, including tomatoes, cucumbers, peppers, artichokes, leeks, broccoli etc.

All plants listed are offered subject to availability. We have made every effort to ensure that plants are labelled correctly.

We regret we cannot offer a mail order service.

KEY:-

A - Annual **Bi** - Biennial **P** - Perennial **HHP** - Half-hardy perennial

AGM - Award of Garden Merit given by the Royal Horticultural Society

Plants listed in blue are new additions this year

CAUTION - POISONOUS PLANTS

Although herbs have been used safely for hundreds of years, many are powerful medicines and must only be taken with professional advice. Some common plants can be toxic if eaten and are listed category B (Code - Cb).

Others may cause skin irritation or allergies (if susceptible) especially in conjunction with sunlight. These are listed category C (Code - Cc) With common sense precautions (i.e. use gloves when handling) these plants can be grown without problems as they have for many years.

Magellanica 'Aurea'

Fuchsia

boliviiana

'Adinda' AGM Triphylla type with sage-green leaves and large clusters of salmon flowers
'Billy Green' AGM Upright bush with long tubular flowers of salmon-pink
boliviiana Rare species from Bolivia, large tender shrub with clusters of long scarlet-red flowers
